- Ammonia emission inventories: availability of AD and EF
- ammonia emission abatement: mainly storage and manure application
-Manure quality regulations in Russian Federation in relation to soil quality
Some topics: relation with visibility
Manure spreading in spring
Grazing is abatement technique
Ammonia abatement workshop

We got a good impression of agriculture, ammonia emissions and ammonia emission abatement in eastern and western countries. However no much time for discussion and exchange of ideas. This will be a good basis for further cooperation and also the proceedings will contribute to this.

Output.
1. Presentations will be put on TFRN website
2. Proceedings, deadline for papers extended to 6 April
3. Agreement on Resolution; new Expert Panel on N in EECCA countries.
