

Proposal for supplying costs for ammonia abatement measures from livestock across Europe / Canada

Carlos Piñeiro¹, Gema Montalvo², Mariano Herrero³, Manuel Bigeriego⁴

¹PigCHAMP Pro Europa S.A.; ²Tragsega; ³Feaspor; ⁴MARM

Workshop on “Cost of ammonia abatement and the climate co-benefits”

TFRN-5

October 25-27th 2010. Paris, France

Current situation

- ✓ Extra data provided must be reviewed and approved by Spanish Technical Working Group and the Ministry **but the most important reasons are :**
- ✓ We can provide only Spanish data (different sets, old ones, updated, under revision...)
- ✓ We will need emission rates for every kind of animal for every country
- ✓ In the GD there are already CAPEX and OPEX cost. Calculations will be performed with those values and more time is required
- ✓ So...

Proposal

✓ Using:

- Data from the GD
- Emissions data from every country for every species and every productive stage
- Assumptions for productivity for each country (piglets /sow / year, Kg of milk / cow, ...)

Supplied through agreed templates (we will send them)

- ✓ The work will be performed for pigs, poultry and cattle
- ✓ Once the info is collected and compiled, we will prepare a report (per country / all together/ etc) to be finalised **before Christmas** if we get the info at least 3 weeks before that
